Once regarded as the leading commercial CAD application, AutoCAD Cracked Accounts now competes with at least three other major software applications: MicroStation, OpenCAD, and D-Space. In addition to the basic drafting and design capabilities of other CAD packages, AutoCAD includes a number of specialized features which set it apart from the others. One of AutoCAD's most powerful features is its ability to utilize the large network of AutoCAD Certified Users (ACUs) from around the world who are willing to take time to serve as support for other users of the software. Autodesk provides free access to the support that an ACU provides to other AutoCAD users, for a limited time and for a specific product version. An ACU can be a knowledgeable individual who has, or once had, an engineering job that required a knowledge of AutoCAD. Or, a member of Autodesk's technical support staff who was hired by Autodesk to provide support specifically for AutoCAD. An ACU can also be a long-time user who is willing to share his knowledge of AutoCAD with others. As Autodesk states: "An AutoCAD Certified User is simply an AutoCAD user who is also an AutoCAD Certified Instructor (ACI). To become an ACI, users must first complete all the exams, then successfully complete the course within the designated number of hours, and pass a panel interview that ensures their knowledge of AutoCAD is current and up-to-date. "AutoCAD Certified Users are usually active and involved ACU's who are willing to teach the community at large how to use AutoCAD. AutoCAD Certified Users are also subject matter experts in AutoCAD and are considered part of the AutoCAD Technical Support Team. "This Web site is intended to help you communicate with ACUs and get the best support and assistance you can with AutoCAD. This Web site will also provide instructions for purchasing training and support." In this article, I will discuss some of the more frequently asked questions about the ACU program. How Does Autodesk ACUs Work? To become an ACU, a user must complete the exam and ACI course. In addition, the ACU must pass a panel interview that ensures their knowledge

A* b_ptr = dynamic_cast(b_ptr); Does this exist? A: There is a member function in std::vector called begin that gives you a pointer to the first element in a vector. If you want the beginning of a second vector, just use: vector a_list; vector b_list; a_list.push_back(new A); b_list.push_back(new B); A* a = a_list.begin(); B* b = b_list.begin(); A: Yes, there is, and it works just fine. vector a_list; vector b_list; a_list.push_back(new A); b_list.push_back a1d647c40b
